## OpenWeatherMap - (Ex., Salem, IN) :

The screenshot shows the OpenWeatherMap website interface. At the top, there is a navigation bar with the OpenWeather logo and various links like 'Weather in your city', 'Guide', 'API', 'Dashboard', 'Marketplace', 'Pricing', 'Maps', 'Our Initiatives', 'Partners', 'Blog', 'For Business', 'Kuma...', and 'Support'. Below the navigation bar, the main heading 'Weather in your city' is displayed. A search bar contains the text 'Salem, IN' and a 'Search' button. Below the search bar, the weather data for Salem, IN is shown, including a weather icon, the temperature '26.9°C', and a description 'overcast clouds'. The temperature is also shown as a range 'temperature from 26.9 to 26.9 °C'. Other details include 'wind 3 m/s', 'clouds 94 %', and '1009 hpa'. The geo-coordinates are listed as '[11.65, 78.1667]'. Below the weather data, there is a section titled 'Search engine is very flexible. How it works:' followed by a bullet point explaining that to make the search more precise, the city's name, comma, and 2-letter country code (ISO3166) should be used. The order is important: city name, then comma, then country. Examples given are 'London, GB' and 'New York, US'.
